

### Key Features

- Full Text Search
- Context Sensitive Search
- File Structure Navigation View
- Thumbnail and Native Document Viewer

### Key Advantages

- Find Engineering Content in SharePoint
- Exchange Engineering Content with SharePoint
- Secure Access for Engineering Content

### InnoCielo Meridian Enterprise SharePoint Integration

InnoCielo Meridian Enterprise offers your organization an engineering content management solution to streamline business processes related to creation, collaboration and distribution of engineering content. With the **integration of InnoCielo Meridian Enterprise and Microsoft SharePoint** engineering content is immediately accessible to the entire organization. This improves knowledge sharing and collaboration with internal and external stakeholders. Non-engineers and external staff, such as contractors and staff from subsidiaries, can now use SharePoint to search, retrieve and update engineering content managed in InnoCielo Meridian Enterprise.

### Accessing Engineering Content from SharePoint

The InnoCielo SharePoint Explorer provides SharePoint users access to documents managed in InnoCielo Meridian Enterprise. Engineering documents are included in the results of the standard and advanced search from SharePoint and can be accessed directly from the SharePoint client. Additionally, the InnoCielo Meridian Explorer with its powerful search, ease-of-use and extensive configurability is integrated in the SharePoint client. It provides full text search on properties and on document content to find documents in the InnoCielo repository. The user can also navigate through the folder tree from the vault.

Alongside that, the user can query the repository interactively by selecting specific property values from the list found in their current result set. In this way users can quickly narrow down their search from the hundreds of thousands of documents present in the repository to the tens of documents they are interested in. Search results are presented in the familiar list format or, alternatively, as easily recognizable thumbnails.

### Collaborating on Engineering Content from SharePoint

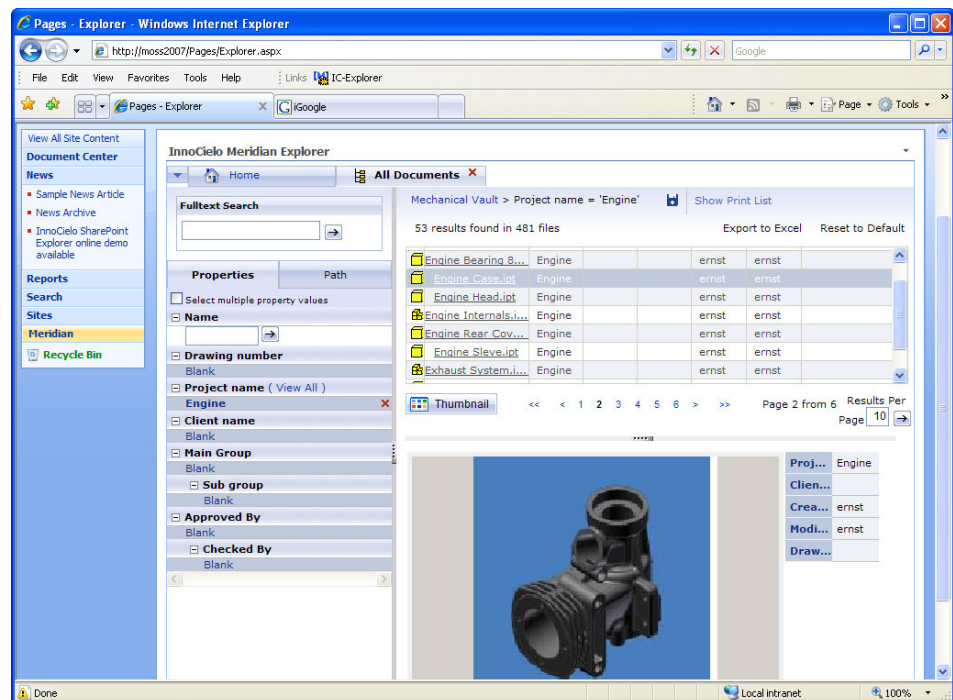

The InnoCielo Global Collaboration Framework (IC-GCF) enables companies with multiple engineering teams working with InnoCielo Meridian Enterprise to collaborate with each other, while retaining their own separate working environments and processes. The engineering content exchanged can vary from Microsoft Office documents to 2D/3D CAD drawings and assemblies.

With the **integration of InnoCielo Meridian Enterprise and Microsoft SharePoint** it is now also possible for engineers working in InnoCielo Meridian Enterprise and non-engineering staff working in SharePoint to exchange and collaborate on documents. Such collaboration is useful for exchanging and managing requirements, specifications and other technical documents needed in the engineering process, and can also be used between different geographical locations.

### Advantages

The InnoCielo Meridian Enterprise SharePoint Integration module provides key benefits and enables best practices for all InnoCielo Meridian Enterprise users across various industries.

- Leverage the best of both: InnoCielo Meridian Enterprise for management of engineering content and SharePoint for enterprise-wide access to information
- Find engineering content when searching for documents in SharePoint
- Secure and enterprise-wide access to engineering content from inside the SharePoint client
- Enable engineers and non-engineers to share and collaborate on documents
